                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         This polypeptide comprises the novel surface exposed protein Ompl5 of the human respiratory pathogen Chlamydia pneumoniae. Its amino acid sequence was deduced from DNA (see XOB(87) isolated from a C. pneumoniae expression library. The invention provides 12 novel surface exposed proteins, Omp4-Omp15 (see WB8417-28), and nucleic acid sequences encoding them (see XOB(81-27). A new species specific test is claimed that is used to identify mammals (including humans) infected with Chlamydia pneumoniae. The test comprises detecting antibodies specific for Omp4-Omp15 or detecting
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  our person and processing these outer membrane proteins, especially by PCR. The proteins are also used in the diagnosis of C. pneumoniae infection in mammals. The nucleic acids and proteins can also be used in the immunization of mammals, the nucleic acids being particularly useful as DNA vaccines for effecting in vivo expression of antigens. The vaccines may also prevent atherosclerosis and bronchial asthma, which are possibly associated
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   NTSEKGSLSLACNQETLFASNSAKEKGGAIYAKHM-VLRYNGPVSFINN----SAKIGGA

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  chlamydia trachomatis (see 201425). The polypeptides can be used as vaccines against Chlamydia trachomatis. The polypeptides can be used as vaccines against Chlamydia trachomatis. Antisense and ribozyme sequences can also be used to control growth of the microorganism. Chlamydia trachomatis is responsible for a large number of diseases, e.g. eye diseases such as conventional trachoma, nonendemic trachoma, and inclusion conjunctivitis; genital diseases such as mongeneococcal uretritis, epidymitis, cervicitis, salpingitis, perihepatitis, bartholinitis; pneumopathy in breast feeding infants; and venereal lymphogranulomatosis. The polypeptides of the invention may be of use in treating these diseases.
                                                                                                                                                                                                                                                                                        Vaccine; eye disease; conventional trachoma; nonendemic trachoma; paratrachoma; inclusion conjunctivitis; genital disease; perihepatitis; nongonococcal uretritis; epidymitis; cervicitis; salpingitis; bartholinitis; pneumopathy; venereal lymphogranulomatosis.

Chlamydia; 98 kDa outer membrane protein; antigen; immunogen; infection; vaccine; antibacterial; community acquired pneumonia; bronchitis; sinusitis; acute respiratory disease; upper respiratory tract disease; asthma; atherosclerosis.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     The present sequence is the mature, processed form of CPN100640, the 98 kDa outer membrane protein from Chlamydia pneumoniae. Chlamydia pneumoniae is a common cause of community acquired pneumonia and upper respiratory tract symptoms and diseases, including bronchitis and respiratory tract symptoms and diseases, including bronchitis and The 98 kDa outer membrane protein is a C. pneumoniae-specific antigen which can confer immune protection against chlamydial infection. The nucleotide sequence encoding the protein or the protein itself may be administered as a vaccine to prevent or treat infection and they may also be used to diagnose infection. The gene encoding CPN100640 was amplified from Chlamydia pneumoniae genomic DNA by PCR.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          New polynucleotide encoding the Chlamydia 98 kiloDalton outer membrane protein, useful for preventing or treating Chlamydia infection .
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   97 DLSIQNFRFLSFTDCSSKESSPS--IIHQKNGQLSLRNNGSMSFCRNHAFGGSGGAISADA 154

The present invention relates to new nucleic acid sequences and the proteins encoded by the nucleic acid sequences. The encoded proteins comprise an immunogenic portion of a Chlamydia antigen. The encoded proteins are useful for the serodiagnosis and treatment of Chlamydia infection. Chlamdiae are intracellular bacterial pathogens that are responsible for a wide variety of human infections. C. trachomatis infection is one of the most common sexually transmitted diseases and can lead to pelvic inflammatory disease (PID), resulting in tubal obstruction and infertility. Trachoma due to ocular infection with C. trachomatis is the leading cause of preventable blindness worldwide. C. pneumonia is a major cause of acute respiratory tract infections in humans and is also coronary heart disease. The present sequence is a nucleic acid sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Isolated polypeptide for diagnosis and treatment of Chlamydia infect comprises immunogenic portion of Chlamydia antigen, which comprises amino acid sequence encoded by polynucleotide sequence
                                                                                                                                                                                                                                                                                                                 Chlamydial infection; sexually transmitted disease; pelvic inflammatory disease; PID; tubal obstruction; infertility; trachoma; blindness; acute respiratory tract infection; atherosclerosis; coronary heart disease; antibacterial; ss.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Stromberg

The present sequence represents the complete genome of Chlamydia trachomatis. Open reading frames (ORFs) of the genome encode polypeptides Carlo 53454. "The Polypeptides can be used as vaccines against Chlamydia trachomatis. Antisense and ribozyme sequences can also be used to control growth of the microorganism. Chlamydia trachomatis is responsible for a large number of diseases, e.g. eye diseases such as conventional trachoma, nonendemic trachoma, paratrachoma, and inclusion epidymitis, genital diseases such as nongonococcal uretritis, peneumopathy in breast feeding infants; and venereal lymphogranulomatosis.
                                                                                                                                                                                                                                                                                                                                                                                                                             G; 305001 T; 432 other;

The present invention relates to new nucleic acid sequences and the proteins encoded by the nucleic acid sequences. The encoded proteins comprise an immunogenic portion of a Chlamydia antigen. The encoded proteins proteins are useful for the serodiagnosis and treatment of Chlamydia infection. Chlamdiae are intracellular bacterial pathogens that are responsible for a wide variety of human infections. C. trachomatis infection is one of the most common sexually transmitted diseases and can lead to pelvic inflammatory disease (PID), resulting in tubal obstruction and infertility. Trachoma due to ocular infection with C. trachomatis is the leading cause of preventable blindness worldwide. C. pneumonia is a major cause of acute respiratory tract infections in humans and is also chought to play a role in the pathogenesis of atherosclerosis and correctionary heart disease. The present sequence is a nucleic acid sequence
                                                                                                                                                                                                                                                                                                                                                  Isolated polypeptide for diagnosis and treatment of Chlamydia infection comprises immunogenic portion of Chlamydia antigen, which comprises amino acid sequence encoded by polynucleotide sequence
                                                                                                                                                                                                                                            EJ;

```
pneumoniae protein (PI), given in the specification. The isolated nucleic acid is useful for diagnostic and analytical methods, such as, with as, hybridization-based assays or amplification-based assays. The protein may be used for diagnostic purposes, for their enzymatic or structural activity, or as a vaccine. The invention also describes (I) a probe comprising a hybridizate under stringent conditions to NI; (3) an expression (N2) that hybridizes under stringent conditions to NI; (3) an expression cassette comprising NI under the transcriptional requlation of a transcriptional initiation region functional in an expression host, and a transcriptional termination region; (4) a cell comprising an expression cassette of (3) as part of an extrachromosomal element or integrated into the genome of a host cell as a result of induction of the expression cassette into the host cell, and the cellular progeny of the host cell; (5) a method for producing a PI comprising growing a cell of (4) where the protein is expressed and isolating the protein free of other contrains; (6) a purified polypoptide composition comprising at least 50 exercises.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Sequence 273254 BP; 76423 A; 51054 C; 61965 G; 83812 T; 0 other;

This sequence encodes a Chlamydia antigen of the invention, designated CPN100638. The nucleic acids (and their complementary sequences) may be used as diagnostic agents for detecting the presence of nucleic acids encoding Chlamydia antigens in samples according to standard methods.

In character, for diagnosing Chlamydia infections. For example, they may be used as primers and probes for diagnostic polymerase chain reaction (PCR) assays. Antisense sequences may be used to down regulate expression of the proteins and may be used to treat infections. The expression of the proteins and may be used to treat infections. The nucleic acids may also be used to produce the protein antigens they encode according to standard recombinant DNA methodologies. The proteins may then be used as antigens for the production of antibodies of the preventing infection by Chlamydia. The artibodies may also be used as diagnostic reagents for detecting infections. Chlamydia is a pathogen implicated in the development of for example) community acquired pneumonia, upper respiratory tract disease (especially bronchtis and sinusitis, asthmatic bronchtis,
                                                                                                                     Nucleic acids encoding polypeptide antigens from Chlamydia useful for preventing, diagnosing and treating diseases such as community acquired pneumonia, bronchitis, sinusitis and asthmatic bronchitis, adult-onset
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     154 ACAAATGCAGATGGAACTATCTATAATCTAACAGGGGATGTCTCAATCAC 203

This sequence encodes a Chlamydia antigen of the invention, designated CPM100638. The nucleic acids (and their complementary sequences) may be used as diagnostic agents for detecting the presence of nucleic acids encoding Chlamydia antigens in samples according to standard methods.

CE encoding Chlamydia antigens in samples according to standard methods, and therefore, for diagnosing Chlamydia infections. For example, they may be used as primers and probes for diagnostic polymerase chain reaction (PCR) assays. Antisense sequences may be used to down requiate expression of the proteins and may be used to treat infections. The nucleic acids may also be used to produce the protein antigens they encode according to standard recombinant DNA methodologies. The chocker of the proteins may then be used as antigens for the production of antibodies (i.e. as vaccines) for preventing infection by Chlamydia. The antibodies may also be used as diagnostic reagents for detecting infections. Chlamydia is a pathogen implicated in the development of infections. Chlamydia is a pathogen implicated in the development of infections. Chlamydia is a pathogen implicated in the development of disease (especially bronchitis and sinusitis, asthmatic bronchitis, adult. onset asthma and acute exacerbations of asthma in adults.
                                                                                                                                                                                                                                               polypeptide antigens from Chlamydia useful for
and treating diseases such as community acquired
sinusitis and asthmatic bronchitis, adult-onset
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     142 isAlaGluGlySerGlyGlyAlaIleSerAlaAspAlaPheSerLeuGln 158

```

```
This DNA sequence codes for the novel 98.4 kDa surface exposed protein Omp10 (see W88423) of the human respiratory pathogen chlamydia pneumoniae. By generating antibodies against C. Chlamydia pneumoniae outer membrane complex, a polyclonal antibody (PAB 150) was obtained which reacted with outer membrane proteins. The cantibody was used to identify the genes (see X06816-27) encoding comp4-0mp15 proteins (see W88417-28) in an expression library of C. pneumoniae DNA. The genes are situated in 2 gene clusters: Omp12.11.10.5.4.13 and 14 in one cluster and Omp6.7.8,9 and 15 in the other, and encode polypeptides of about 89.6-100.3 kDa and about 56.1 kDa. The invention provides a new species specific test for identifying mammals (including humans) infected with Chlamydia pneumoniae. The test comprises detecting antibodies specific for Omp4-0mp15 or detecting nucleic acid fragments encoding these outer
                                                                                                                                                                                                                                                                                                          Species-specific test for identifying mammals infected with Chlamydia pneumoniae · comprises detecting antibodies specific for outer membrane proteins of C. pneumoniae or nucleic acids encoding these proteins
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       membrane proteins, especially by PCR. The proteins are also used in the diagnosis of C. pneumoniae infection in mammals. The nucleic acids and proteins can also be used in the immunization of mammals, the nucleic acids being particularly useful as DNA vaccines for effecting in vivo expression of antigens. The vaccines may also prevent atherosclerosis and bronchial asthma,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   erProSerIleIleHisGlnLysAsnGly...GlnLeuSerLeuArgAsn 132
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         CTGGGAATCTTTCCTATCCAGGCCACGGCTACCAATTTCTCCTACAAAAT 303

The present sequence represents the complete genome of Chlamydia pneumoniae, and encodes proteins Y34584-Y35879. C. pneumoniae causes respiratory disease such as pneumonia and bronchitis and is thought to be a contributing factor in heart disease, sarcoidosis, sinusitis, purulent otitis media, erythema nodosum or pharyngitis. The polypeptides encoded by the open reading frames of the C. pneumoniae genome (see Y34584-Y35879) can be used in immunogenic compositions as vaccines. Vectors containing C. pneumoniae nucleotides sequences can also be used as immunogenic compositions, especially where the vector directs the expression of a neutralising epitope of C. pneumoniae.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Sequence 1230025 BP; 367213 A; 249833 C; 249013 G; 363589 T; 377 other;

This sequence encodes a Chlamydia antigen of the invention, designated CPN100639. The nucleic acids (and their complementary sequences) may be used as diagnostic agents for detecting the presence of nucleic acids encoding Chlamydia antigens in samples according to standard methods, and therefore, for diagnosing Chlamydia infections. For example, they may be used as primers and probes for diagnostic polymerase chain reaction (PCR) assays. Antisense sequences may be used to down regulate expression of the proteins and may be used to treat infections. The nucleic acids may also be used to produce the protein antigens they encode according to standard recombinant DNA methodologies. The proteins may then be used as antigens for the production of antibodies of introdies may also be used as diagnostic reagents for detecting antibodies may also be used as diagnostic reagents for detecting infections. Chlamydia is a pathogen implicated in the development of
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Nucleic acids encoding polypeptide antigens from Chlamydia useful for preventing, diagnosing and treating diseases such as community acquired pneumonia, bronchitis, sinusitis and asthmatic bronchitis, adult-onset
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   (for example) community acquired pneumonia, upper respiratory tract disease (especially bronchitis and sinusitis, asthmatic bronchitis, adult-onset asthma and acute exacerbations of asthma in adults.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Sequence 3000 BP; 858 A; 726 C; 592 G; 824 T; 0 other;

```

This DNA sequence codes for the novel 97.6 kDa surface exposed protein Omp11 (see W88424) of the human respiratory pathogen Chlamydia pneumoniae. By generating antibodies against Chlamydia pneumoniae by generating antibodies against C pneumoniae outer membrane complex, a polyclonal antibody (PAB 150) as obtained which reacted with outer membrane proteins. The antibody was used to identify the genes (see X08816-27) encoding omp4-omp15 proteins (see W88417-28) in an expression library of C pneumoniae DNA. The genes are situated in 2 gene clusters: Omp12.11.10.5.4.13 and 14 in one cluster and Omp6.7.8, 9 and 15 in the other, and encode polypeptides of about 89.6-100.3 kDa and shout 56.1 kDa. The invention provides a new species specific test for identifying mammals (including humans) infected with Chlamydia pneumoniae. The test comprises detecting antibodies specific for membrane proteins are also used in the diagnosis of C pneumoniae infection in mammals. The nucleic acids being particularly useful as DNA waccines for effecting in vivo expression of antigens. The vaccines may also prevent atherosclession of antigens. The which are possibly associated with C. pneumoniae

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               116
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  143
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  487
Species-specific test for identifying mammals infected with Chlamydia pneumoniae - comprises detecting antibodies specific for outer membrane proteins of C. pneumoniae or nucleic acids encoding
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         This DNA sequence codes for the novel 97.2 kDa surface exposed protein Omp5 (see W88418) of the human respiratory pathogen Chlamydia pneumoniae. By generating antibodies against C. pneumoniae outer membrane complex, a polyclonal antibody (PAB 150) was obtained which reacted with outer membrane proteins. The mantibody was used to identify the genes (see X06816.27) encoding Omp4 Omp15 proteins (see W88417-28) in an expression library of C. pneumoniae DNA. The genes are situated in 2 gene clusters:
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Omp5; outer membrane protein 5; surface exposed protein; antigen; infection; diagnosis; vaccine; atherosclerosis; asthma; ss.

Chlamydia

Mygind P;

```
comp12,11,10,5,4,13 and 14 in one cluster and Omp6,7,8,9 and 15 in the other, and encode polypeptides of about 80.6-100.3 kpa and about 56.1 kpa. The invention provides a new species specific test for identifying mammals (including humans) infected with Chlamydia pneumoniae. The test comprises detecting antibodies specific for Comp4-Omp15 or detecting nucleic acid fragments encoding these outer membrane proteins, especially by PCR. The proteins are also used in the diagnosis of C. pneumoniae infection in mammals. The nucleic acids and proteins can also be used in the immunization of mammals, the nucleic acids being particularly useful as DNA vaccines for effecting in vivo expression of antigens. The vaccines may also prevent atherosclerosis and bronchial athma, which are possibly associated with C. pneumoniae.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            257

This sequence encodes a Chlamydia antigen of the invention, designated CPN100639. The nucleic acids (and their complementary sequences) may be used as diagnostic agents for detecting the presence of nucleic acids encoding Chlamydia antigens in samples according to standard methods, and therefore, for diagnosing Chlamydia infections. For example, they may be used as primers and probes for diagnostic polymerase chain reaction (PCR) assays. Antisense sequences may be used to down regulate. Expression of the proteins and may be used to treat infections. The nucleic acids may also be used to produce the protein antigens they encode according to standard recombinant DNA methodologies. The nucleins may then be used as antigens for the production of antibodies (i.e. as vaccines) for preventing infection by Chlamydia. The antibodies may also be used as diagnostic reagents for detecting antibodies may also be used as diagnostic reagents for detecting (for example) community acquired pneumonia, upper respiratory tract disease (especially bronchitis and sinusitis, asthmatic bronchitis,
                                                                                                                                                                                                                                                                                                                                                                                                         Nucleic acids encoding polypeptide antigens from Chlamydia useful for preventing, diagnosing and treating diseases such as community acquired pneumonia, bronchitis, sinusitis and asthmatic bronchitis, adult-onset
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          ... The present sequence is the 98kDa putative outer membrane protein gene from Chlamydia pneumoniae. The genomic sequence was amplified using two pcr primers. The 5' primer contains a NotI restriction site, a ribosome binding site, an initiation codon and a sequence close to the 5' end of the 98kDa putative outer membrane protein coding sequence. The 3' primer contains the sequence encoding the C-terminal sequence of the putative outer membrane protein and a BsrGl restriction site. The stop codon was excluded and an additional nuclectide was inserted to obtain an in-frame c-terminal fusion with the Histidine tag. The PCR product was cloned into a eukaryotic expression vector (pCA-MyC-His) by restricting both the vector and the PCR product with NotI and BamHl and performing a liquid or eaction. This expression vector was injected intramuscularly and intranasally into mice, which were subsequently incoulated with chamydia pneumoniae. The chlamydial lung titers of the immunised mice were lower than those of the controls. Thus the 98kDa putative outer membrane protein can be used as a vaccine to provide protections. The polypeptide may also be administered orally to treat Chlamydia infection. The present sequence may also be used in the construction of attenuated Chlamydia strains that can over express the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             124 LysAsnGlyGlnLeuSerLeuArgAsnAsnGlySerMetSerPheCysAr 140
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        683 AAAGGCGGAGCCATTCAGACTTCCGATGCCCTTACCATTACTGGAAACCA 732

The isolated nucleic acid is useful for diagnostic and analytical methods, such as, hybridization-based assays or amplification-based assays. The protein may be used for diagnostic purposes, for their enzymatic or structural activity, or as a vaccine. The invention also describes (1) a probe comprising a hybridizing fragment of NI: (2) an isolated nucleic acid (NI) that hybridizes under stringent conditions to NI: (3) an expression cassette comprising NI under the transcriptional regulation of a transcriptional initiation region functional in an expression host, and a transcriptional termination region; (4) a cell comprising an expression
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          This invention describes a novel nucleic acid (N1) encoding a Chlamydia
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            analytical methods
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               2839

261502-09 encode Chlamydia pneumoniae polypeptides. The polypeptides are present in the bacterial membrane structure, in the external vicinity of the membrane structure, in the inclusion membrane structure, and the external vicinity of the inclusion membrane structure, and in the external vicinity of the inclusion membrane structure, and in the cytoplasm of the infected cell. The polypeptides may be used to prevent, treat and detect the presence of Chlamydia infection and/or the presence of Chlamydia in a sample. The polypeptides may also be used to induce an immune response in a mammal. The vaccine vector comprising the polynucleotides is used to induce an immune response in a mammal. Antibodies directed against the polypeptides may also be used therapeutically to treat and/or prevent a Chlamydia
Novel antigens and corresponding DNA molecules that can be used to prevent, treat and diagnose disease caused by Chlamydia infection in mammals, especially humans -
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  GGTGCGATTTATACCAAAAATTGGTGTTATCCTCAGGACGAGGAGGAGT 1017

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  This John Sequence coucle in over 20.0 know stutators pathogen champide outer membrane complex, a polyclonal antibody controlled the membrane complex, a polyclonal antibody. The preumoniae outer membrane complex, a polyclonal antibody (PAB 150) was obtained which reacted with outer membrane proteins. The antibody was used to identify the genes (see X06816-27) encoding comp4-omp15 proteins (see W88417-28) in an expression library of C. pneumoniae. DNA. The genes are situated in 2 gene clusters: omp12.11.10.5,4.13 and 14 in one cluster and Omp6.7,8,9 and 15 in che other, and encode polypeptides of about 89.6-100.3 kDa and about 56.1 kDa. The invention provides a new species specific test for identifying mammals (including humans) infected with Chlamydia about 56.1 kDa. The test comprises detecting antibodies specific for omp4-omp15 or detecting nucleic acid fragments encoding these outer membrane proteins, especially by PCR. The proteins are also used in the immunization of mammals, the nucleic acids being particularly useful as DNA cacines for effecting in vivo expression of antigens. The controlled may be obtaing particularly useful as DNA vaccines may also prevent atherosclerosis and bronchial asthma, which controlled as the proteins.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Species-specific test for identifying mammals infected with Chlamydia pneumoniae - comprises detecting antibodies specific for outer membrane proteins of C. pneumoniae or nucleic acids encoding these proteins
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Omp8: outer membrane protein 8; surface exposed protein; antigen; infection; diagnosis; vaccine; atherosclerosis; asthma; ss.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 This DNA sequence encodes the novel surface exposed protein Omp5 (see W88429) of Chlamydia pneumoniae, a human respiratory pathogen. It is described as a subsequence of a claimed nucleic acid fragment (see X06817) encoding Omp5 (see W88418). The invention provides a new species specific test for identifying mammals (including humans) infected with C. pneumoniae. The test comprises detecting humans) infected with C. pneumoniae. The test comprises detecting humans) infected with C. pneumoniae. The test comprises detecting antibodies specific for surface exposed proteins Omp4-Omp15 (see X06816-27), especially by PCR. The proteins are also used in the immunization of mammals, the and proteins can also be used in the immunization of mammals, the nucleic acids being particularly useful as DNA vaccines for effecting in vivo expression of antigens. The vaccines may also continue at their occurrence and bronchial asthma, which are possibly
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Species-specific test for identifying mammals infected with Chlamydia pneumoniae - comprises detecting antibodies specific for outer membrane proteins of C. pneumoniae or nucleic acids encoding
                                                                                                                                                                                                                                                                                                                                            Omp5: outer membrane protein 5; surface exposed protein; antigen; infection; diagnosis; vaccine; atherosclerosis; asthma; ss.

The polypeptides are present in the bacterial membrane structure, in the external vicinity of the membrane structure, in the inclusion membrane structure, and the external vicinity of the inclusion membrane structure, and in the cytoplasm of the infected cell. The polypeptides may be used to prevent, treat and detect the presence of Chlamydia infection and/or the presence of Chlamydia in a sample. The polypeptides may also be used to induce an immune response in a mammal. The vaccine response in a mammal. Antibodies directed against the polypeptides may also be used therapeutically to treat and/or prevent a Chlamydia

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        This sequence encodes a Chlamydia antigen of the invention, designated CC CPN100634. The nucleic acids (and their complementary sequences) may be used as diagnostic agents for detecting the presence of nucleic acids encoding Chlamydia antigens in samples according to standard methods, and therefore, for diagnosting Chlamydia infections. For example, they may be used as primers and probes for diagnostic polymerase chain reaction (PCR) assays. Antisense sequences may be used to down regulate expression of the proteins and may be used to down regulate corrected may also be used to produce the protein antigens they encode according to standard recombinant DNA methodologies. The proteins may then be used as antigens for the production of antibodies (i.e. as vaccines) for preventing infection by Chlamydia. The antibodies may also be used as diagnostic reagents for detecting infections. Chlamydia is a pathogen implicated in the development of (for example) community acquired pneumonia, upper respiratory tract disease (especially bronchitis and sinusitis, asthmatic bronchitis,
                                                                                                                       Chlamydia antigen; diagnosis; infection; community acquired pneumonia; therapy; upper respiratory tract disease; bronchitis; sinusitis; asthma; asthmatic bronchitis; adult-onset asthma; acute exacerbations of asthma.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Nucleic acids encoding polypeptide antigens from Chlamydia useful for preventing, diagnosing and treating diseases such as community acquired pneumonia, bronchitis, sinusitis and asthmatic bronchitis, adult-onset
                                                               Chlamydia antigen CPN100634 full length coding sequence.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Sequence 2950 BP; 851 A; 670 C; 596 G; 833 T; 0 other;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        This DNA sequence codes for the novel 98.9 kDa surface exposed protein Omp4 (see W88417) of the human respiratory pathogen chlamped seem w88417) of the human respiratory pathogen chlamped proundiae. By generating antibodies against C. Chlamydiae prounding once outer membrane complex, a polyclonal antibody (PAB 150) was obtained which reacted with outer membrane proteins. The methody was used to identify the genes (see X06816-27) encoding onp4-Omp15 proteins (see W88417-28) in an expression library of C. pneumoniae DNA. The genes are situated in 2 gene clusters: C. cmp12.11,10,5,4,13 and 14 in one cluster and Omp6,7,8,9 and 15 in the other, and encode polypeptides of about 89.6-100.3 kDa and 15 in the check on the other of t
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Species-specific test for identifying mammals infected with Chlamydia pneumoniae - comprises detecting antibodies specific for outer membrane proteins of C. pneumoniae or nucleic acids encoding

nucleic acids and proteins can also be used in the immunization mammals, the nucleic acids being particularly useful as DNA vaccines for effecting in vivo expression of antigens. The vaccines may also prevent atherosclerosis and bronchial asthma, which are possibly associated with C. pneumoniae.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                873

This sequence encodes a Chlamydia antigen of the invention, designated CPN100635. The nucleic acids (and their complementary sequences) may be used as aliagnostic agents for detecting the presence of nucleic acids encoding Chlamydia antigens in samples according to standard methods, and therefore, for diagnosing Chlamydia infections. For example, they may be used as primers and probes for diagnostic polymerase chain reaction (PCR) assays. Antisense sequences may be used to down regulate expression of the proteins and may be used to treat infections. The nucleic acids may also be used to produce the protein antigens they encode according to standard recombinant DNA methodologies. The proteins may then be used as antigens for the production of antibodies (i.e. as vaccines) for preventing infection by Chlamydia. The antibodies may also be used as diagnostic reagents for detecting
                                                                                                                                                                                       Nucleic acids encoding polypeptide antigens from Chlamydia useful for preventing, diagnosing and treating diseases such as community acquired pneumonia, bronchitis, sinusitis and asthmatic bronchitis, adult-onset
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         infections. Chlamydia is a pathogen implicated in the development of
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           (for example) community acquired pneumonia, upper respiratory tract disease (especially bronchitis and sinusitis, asthmatic bronchitis, adult-onset asthma and acute exacerbations of asthma in adults.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  258 CTGGAATAGACTATACTCTGACAGGAGATATAACTCTGCAAAACCTTGGG 307

This DNA sequence codes for the novel 96.7 kDa surface exposed protein Omp9 (see W88422) of the human respiratory pathogen collamydia pneumoniae. By generating antibodies against C. Chlamydia pneumoniae. By generating antibodies against C. pneumoniae outer membrane complex, a polyclonal antibody (PAB 150) was obtained which reacted with outer membrane proteins. The antibody was used to identify the genes (see X06816-27) encoding Omp4-Omp15 proteins (see W88417-28) in an expression library of C. pneumoniae DNA. The genes are situated in 2 gene clusters: C Omp12,11,10,5,4,13 and 14 in one cluster and Omp6,7,8,9 and 15 in the other, and encode polypeptides of about 89.6-100.3 kDa and about 56.1 kDa. The invention provides a new species specific test for identifying mammals (including humans) infected with Chlamydia pneumoniae. The test comprises detecting antibodies specific for Omp4-Omp15 or detecting nucleic acid fragments encoding these outer membrane proteins, especially by PCR. The proteins are also used
                                                                                                                                                                                                                                                                                 Species-specific test for identifying mammals infected with Chlamydia pneumoniae - comprises detecting antibodies specific for outer membrane proteins of C. pneumoniae or nucleic acids encoding
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       membrane proteins, especially by PCR. The proteins are also used in the diagnosis of C. pneumoniae infection in mammals. The nucleic acids and proteins can also be used in the immunization of mammals, the nucleic acids being particularly useful as DNA vaccines for effecting in vivo expression of antigens. The vaccines may also prevent atherosclerosis and bronchial asthma, which are possibly associated with C. pneumoniae.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               381 TTCAACTCTTCGGATGCTTGCAGCTCCTAGGACCACAGGTAAAGGAGCCA 430

This DNA sequence codes for the novel surface exposed protein Omp15 (see W88428) of the human respiratory pathogen Chlamydia pneumoniae. By generating antibodies against C. pneumoniae outer membrane complex, a polyclonal antibody (PAB 150) was obtained which reacted with outer membrane proteins. The antibody was used to identify the genes (see X66816-27) encoding Omp4-Omp15 proteins (see N68816-27) encoding Omp4-Omp15 proteins (see N88417-28) in an expression library of Chlamydia pneumoniae DNA. The genes are situated in 2 gene clusters: Omp12.11,10,5,4,13 and 14 in one cluster and Omp6,7,8,9 and 15 in the other, and encode Colypeptides of about 89.6-100.3 kDa and about 56.1 kDa. The invention provides a new species specific test for identifying mammals (including humans) infected with Chlamydia pneumoniae. The test comprises detecting antibodies specific for Omp4-Omp15 or detecting nucleic acid fragments encoding these outer membrane proteins, especially by PCR. The proteins are also used in the diagnosis of C. pneumoniae infection in mammals. The nucleic acids and proteins are also used in the immunization of mammals, the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       nucleic acids being particularly useful as DNA vaccines for effecting in vivo expression of antigens. The vaccines may also prevent atherosclerosis and bronchial asthma, which are possibly

diseases such as bronchitis, sinusitis and pneumonia, asthma and atherosclerosis. The gene, protein and antibodies can be used as immunosens to induce an immune reaction in humans which has the effect of vaccinating the person. They can also be used to diagnose and treat those infected with the parasite.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               245

encoding Chlamydia antigens in samples according to standard methods, and therefore, for diagnosing Chlamydia infections. For example, they may be used as primers and probes for diagnostic polymerase chain reaction (PCR) assays. Antisense sequences may be used to down regulate expression of the proteins and may be used to treat infections. The nucleic acids may also be used to produce the protein antigens they encode according to standard recombinant DNA methodologies. The proteins may then be used as antigens for the production of antibodies on the preventing infections of Minaydia. The antibodies may also be used as diagnostic reagents for detecting infections. Chlamydia is a pathogen implicated in the development of
                                                                                                                       Nucleic acids encoding polypeptide antigens from Chlamydia useful for preventing, diagnosing and treating diseases such as community acquired pneumonia, bronchitis, sinusitis and asthmatic bronchitis, adult-onset
                                                                                                                                                                                                                                                                         This sequence encodes a Chlamydia antigen of the invention, designated CPN100634. The nucleic acids (and their complementary sequences) may be used as diagnostic agents for detecting the presence of nucleic acids
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          (for example) community acquired pneumonia, upper respiratory tract disease (especially bronchitis and sinusitis, asthmatic bronchitis, adult-onset asthma and acute exacerbations of asthma in adults.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     114 LysGluSerSerProSerIleIleHisGlnLysAsnGlyGlnLeuSerLe 130
